

EGG WAIL 3113

Appearance	: Ivory emulsion
Constitution	: Synthetic and natural waxes emulsion
pH	: 10 ± 1
Dry content	: $7.5\% \pm 0.5$
Charge	: Anionic

Characteristics

EGG WAIL 3113 is a filling-finishing auxiliary made up of particular soft emulsified waxes of medium penetration.

The leathers finished with EGG WAIL 3113 are characterised by their good levelling pattern grain, with a demi-matt and very full waxy touch, slightly greasy and slippery.

EGG WAIL 3113 realises its action while ironing, which, if it is done at temperatures higher than 80°C, gives to the leather a natural and uniform shine.

By using it in the grounds, EGG WAIL 3113 does not change the dyeing of the leather.

Method of Use

EGG WAIL 3113 is advisable for each kind of leather, either as base component in the plate grounds, or as levelling agent and touch modifier in the mixture of resinous covering coat.

The film obtained with EGG WAIL 3113 has got round body and it is very soft, therefore EGG WAIL 3113 is used also in finishing of nappa leathers.

When leathers need more finishing penetration, EGG WAIL 3113 can be used in combination with EGG WAIL 3112.
